Education

National Institute of Technology, Srinagar *Mar 2021 – Jul 2025*
BTech in Computer Science, GPA: 7.46

Jawahar Navodaya Vidyalaya, Kathua *Jun 2019 – Jun 2020*
Higher Secondary Education (Non-Medical), Percentage: 90%

Jawahar Navodaya Vidyalaya, Kathua *Apr 2017 – Apr 2018*
Senior Secondary Education, Percentage: 78.4%

Experience – AI & ML Engineer(Rashmi Metaliks Limited)

PipelineFlow CRM *Jan 2025 – Oct 2025*

- Engineered an **AI-powered full-stack CRM using gemini-3.5-flash, React.js, Node.js, Express.js, PostgreSQL, and Prisma** to manage **company and customer information, sales leads, salesperson activities, performance, enquiries, quotations, and follow-ups**, integrating GenAI and agentic capabilities into sales operations.
- Created **one AI agent with multiple tool functions** for **lead/user creation, lead deletion, lead-to-enquiry conversion, enquiry creation and updates, and lead/enquiry search and retrieval**, enabling CRM operations through natural-language conversations.
- Built an **MCP-based conversational chatbot with tool calling**, connecting the Gemini LLM with CRM tools and backend APIs to retrieve and act on business data through chat.
- Implemented **natural-language intent understanding and tool selection**, allowing the agent to identify the requested CRM action and execute the corresponding tool based on the user's conversational input.
- Implemented **GPS-based user activity tracking using IP/address data**, recording user login activity and last-seen information within the CRM to support **user monitoring, daily follow-ups, and activity tracking**.

HireGem ATS *Nov 2025 – Jun 2026*

- Engineered a **full-stack Applicant Tracking System using React.js, Node.js, Express.js, PostgreSQL, and Prisma** to manage the **end-to-end recruitment lifecycle from candidate applications and screening to interviews, approvals, and offer generation**, with integrated AI-powered resume processing.
- Developed an **NLP-based resume parsing engine using Python and information-extraction techniques** to convert unstructured resumes into structured candidate profiles.
- Implemented **500+ domain-specific heuristics and extraction rules** to identify and normalize **skills, education, experience, contact information, and other recruitment-specific attributes** from resumes.
- Built an automated **resume ingestion and processing pipeline using IMAP** to handle **1,000+ applications**, extract candidate information, and store normalized profiles in **PostgreSQL**.
- Integrated **Microsoft Graph API and OneDrive** to automate **candidate document retrieval, storage, and management** across the recruitment workflow.

Technologies & Skills

- **Languages:** Python, SQL, ReactJS, JavaScript.
- **AI & ML:** GenAI, ML, DL, NLP, LLMs, RAG, AI Agents, MCP.
- **Tools & Database:** Git, Docker, PostgreSQL, Prisma.
- **Core CS Concepts:** DSA, DBMS, OOP, Operating Systems, Computer Networks.
